DESIGNER'S RESPONSE

Auditors: John Bowman (Audit Team Leader) – JB Road Safety Consultancy Ltd.
Beth Newiss (Audit Team Member)

Date Audit Completed: Monday 12th June 2017

Dover Road, Deal PROPOSED ACCESS ARRANGEMENTS OPTION A

This response is to a Stage 1 Road Safety Audit to the design standard detailed within Volume 5, Section 2, Part 2 (HD19/15) of the Design Manual for Roads and Bridges (Road Safety Audit).

Problem no. in safety audit report	Problem(s) accepted (yes/no)	Recommended measure accepted (yes/no/in part)	Alternative measure (detail description)
GENERAL			
2.1	Yes	Yes	Accepted. Details on lighting, signage, vegetation and drainage will be provided at the detail design stage for the Stage 2 Road Safety Audit.
PROBLEM			
2.2	No	Yes	Noted. Widening of the footway has been provided on the opposite side of the carriageway, as such existing driveway will be maintained and remain in-situ. Furthermore information will be provided at the detailed design and be subject to a Stage 2 Road Safety Audit.
2.5	No	In part	Noted. The design team cannot provide a connecting footway on the eastern footpath from the site to the existing southbound bus stop as the applicant is not in control of the land past their site boundary. A connection to the site boundary can be provided. An additional uncontrolled crossing can be provided but outside of the site boundary.
2.6	No	No	Noted. The proposal allows for a 2m wide footway only. Cycle movements have been projected within the TA that the development would generate one two-way cycling trip in the Am peak hour and two two-way trips in the PM peak hour. The access has been designed in accordance with the 'Kent Design Guidance' which considers the needs of all users, therefore we consider this unnecessary.

1. Introduction

- 1.1 This report has been produced as a result of a Stage 1 Road Safety Audit (RSA) carried out at the request of Icen Projects, based at Flitcroft House, 114 – 116 Charing Cross Road, London, WC2H 0JR.

The RSA considered the proposals associated with widening of the A258 Dover Road, Walmer, and the introduction of a ghost right turn lane leading to a new access for a residential development on the eastern side of Dover Road, and a new 2m wide footway, relocation of a bus stop the provision of a new footway to the relocated bus stop, the removal of an existing pedestrian island and introduction of a new pedestrian island north of the new junction.

In summary, the proposals considered as part of this Stage 1 RSA are:

- The widening of the A258 Dover Road, Walmer and provision of a ghost right-turn lane on the eastern side of the road;
- The provision of a new 5.5m access road on the eastern side of Dover Road;
- The provision of a new southbound bus from its current location southwards;
- The provision of a 2m wide footway cycleway on the northern side of the new access road leading to the relocated bus stop;
- The widening to 1.8m of the existing western footway northwards;
- The provision of a new uncontrolled pedestrian crossing with central island and tactile paving on Dover Road, on the northern side of the new access road;
- The removal of a centre island on Dover Road north of the new access, and
- Associated road markings.

The report has been prepared for submission directly to Mr Ed Faldo at the offices of Icen Projects in London.

The Audit Team membership was as follows:

John Bowman MCIHT MSoRSA
 JB Road Safety Consultancy Ltd

Beth Newiss AMCIHT, MSoRSA;
 Traffic Safety Consultant

The terms of reference for the RSA are as described in Chapter 2 of HD 19/15. The Audit Team has examined and reported only on the road safety implications of the proposed scheme as presented and has not examined or verified the compliance of the scheme to any other criteria.

The audit took place at the Chelmsford Office of JB Road Safety Consultancy Ltd during June 2017. The audit comprised of an examination of the drawings and documents provided by the Design Organisation, and listed in Appendix A to this report.

- **Drawing Number 06.2 Revision - – Dover Road, Walmer, Kent - Potential Access Arrangement – Option B – Icen**

- **Drawing Number 06 Revision - - Dover Road, Walmer, Kent – Swept Path Analysis – Icen**

Other documents referred to for the purpose of this Stage 1 RSA were

- **Collision Data 01 July 2013 – 30 June 2016 – Cross Road and Dover Road Deal – Kent County Council – 10 March 2017.**
- **RSA 1 Safety Audit Brief Dover Road Option 2 - Dated 9th June 2017 – Icen Projects**

The Stage 1 Road Safety Audit was undertaken by the Audit Team detailed above and the site was visited, with both Audit Team members in attendance during the late morning and early afternoon of Monday 12th June 2017, when the weather conditions were dry and sunny with a dry road surface.

During the visit there was a constant flow of traffic along Dover Road in the vicinity of the site, comprising of buses, private cars and light goods vehicles. There were a number of pedestrians, including a number of older pedestrians primarily walking towards the southbound bus stop from the north. No cyclists or equestrians were seen.

- 1.2** No details of any Departures from Standard have been provided by the Design Organisation.
- 1.3** Speed data has not been provided by the Design Organisation for the relevant location, and during the site visit the Audit Team commented that the overall speed of northbound road users appeared to be in excess of the 30mph speed limit. Whilst the provision of a Vehicle Activated Sign on the northbound route would tend to support this, it is not known what the rationale behind this provision was or when.
- 1.4** During the course of the site visit a number of older persons were seen to arrive at the southbound bus stop from the north.
- 1.5** Collision data, obtained from Kent County Council, for the 3-year period up to 30th June 2016 for the relevant location and has been provided by the Design Organisation to the Audit team. Full details are shown in the Audit Brief Section A2.

2. Items Raised During This Stage 1 Road Safety Audit

As a result of an examination of the drawings and documents supplied by Icen Projects, and the site inspection undertaken between 11:15hrs and 12:30hrs on Tuesday 13th June 2017, the problems highlighted in Sections 2.1 to 2.5 were identified. The recommended course of action that should be taken in respect of each problem was also indicated, and the locations are shown on the A3 drawing in Appendix B.

2.1 GENERAL

The drawings and documentation provided make no reference of the following:

- a) Lighting – the provision of any new lighting columns;
- b) Signage – the provision of any new signs, including bollards on the new island, 'new road layout' and 'junction ahead' warning sign relating to the new access;
- c) Vegetation – the cut back of vegetation encroaching onto the footway opposite the new junction, and
- d) Drainage – the re-location of existing and / or provision of new gullies where appropriate.

RECOMMENDATION

It is recommended that all information be provided for the detailed design Stage 2 Road Safety Audit, and in accordance with the Local Authority policy.

2.2 PROBLEM

Location : Dover Road

Summary: Existing Driveways

The drawing provided makes no reference to any existing driveways that front onto Dover Road on the western side, and it is not clear what provision is to be made in respect of kerbing and footway crossovers.

RECOMMENDATION

It is recommended that all information be provided for the detailed design Stage 2 Road Safety Audit, and in accordance with the Local Authority policy.

2.3 THE ALIGNMENT

No safety issues raised at this Stage 1 Road Safety Audit.

2.4 THE JUNCTIONS

No safety issues raised at this Stage 1 Road Safety Audit.

2.5 NON MOTORISED USERS (NMUS)

PROBLEM

Location A: Dover Road / New access – new footway and crossing facility

Summary: Pedestrian access to southbound bus stop

The drawing provided shows the provision of a new 2m wide footway / cycleway leading from the new access road to a new bus stop north of the access. This new bus stop on Dover Road, is approximately 80m south of the existing one near the junction with Downlands. Whilst the new bus stop will serve residents from the new development and those on the western side of Dover Road via the new island, pedestrians wishing to access it from the north will have to cross Dover Road in the vicinity of Downlands, walk to the new crossing point and walk back or walk in the carriageway. Whilst the crossing facility gives access to both the north and southbound bus stop from the proposed development the footway on the eastern side of Dover Road stops at the bus stop. The absence of a connecting footway northwards to Downlands may encourage pedestrians to walk in the carriageway rather than the increased distance involved, increasing the risk of conflict with other road users.

RECOMMENDATION

It is recommended that the Design Team explore the possibility of extending the proposed eastern footway to tie-in with the existing one, providing a connecting link on the eastern side or an additional uncontrolled pedestrian crossing facility in the vicinity of the existing southbound bus stop. Full details to be provided at the detailed design stage for the Stage 2 Road Safety

2.6 PROBLEM

Location B : Dover Road – New footway / cycleway

Summary: No connectivity for pedal cyclists

The drawing provided shows the provision of a new 2m wide footway / cycleway leading from the new development. No details have been provided as to whether this is to be a shared facility or not. However, the proposed facility does not outline how pedal cyclists are to access Dover Road. The lack of proper joining facilities increases the risk to all road users as pedal cyclist would chose as and when to join / leave the Dover Road.

RECOMMENDATION

It is recommended that the Design Team liaise with Kent County Council Cycling Officer to explore the most appropriate measures for joining Dover Road. Full details to be provided at the detailed design stage for the Stage 2 Road Safety

2.7 SIGNING & LINING

No issues at this Stage 1

3. Road Safety Audit Team Statement

We certify that this audit has been undertaken in accordance with HD 19/15.

Appendix C

(Designers Response report to this Stage 1 Road Safety Audit)

THIS PAGE IS INTENTIONALLY LEFT BLANK

DESIGNER'S RESPONSE

Auditors: John Bowman (Audit Team Leader) – JB Road Safety Consultancy Ltd.
Beth Newiss (Audit Team Member)

Date Audit Completed: Monday 12th June 2017

Dover Road, Deal PROPOSED ACCESS ARRANGEMENTS OPTION B

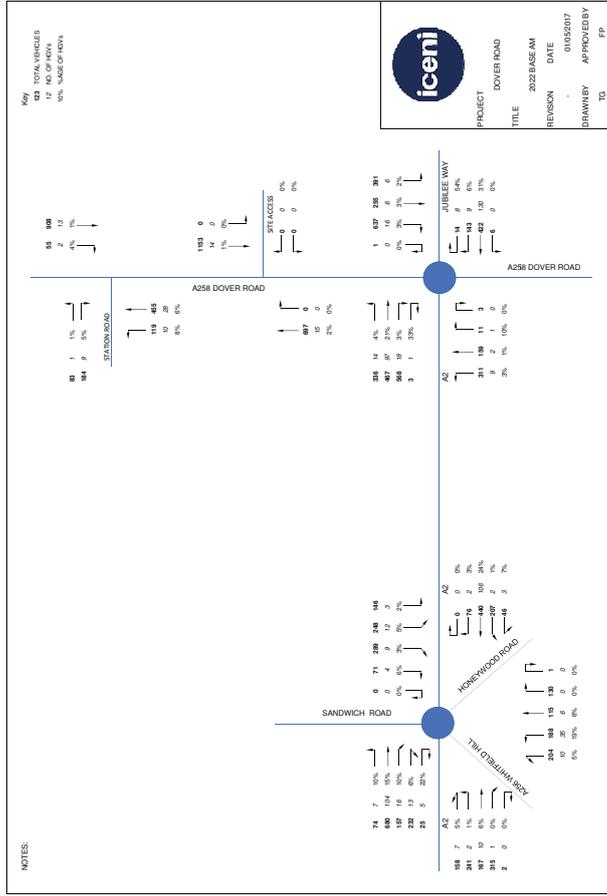

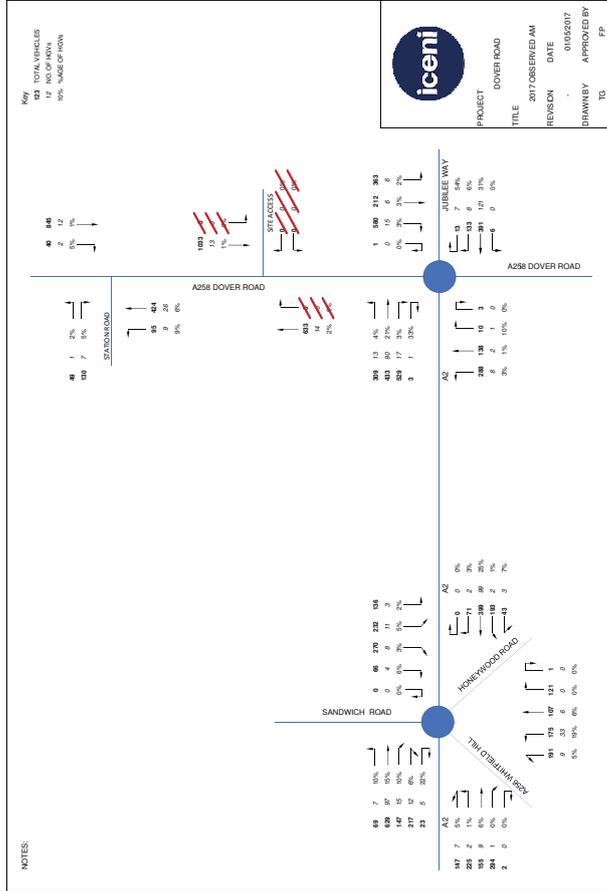

This response is to a Stage 1 Road Safety Audit to the design standard detailed within Volume 5, Section 2, Part 2 (HD19/15) of the Design Manual for Roads and Bridges (Road Safety Audit).

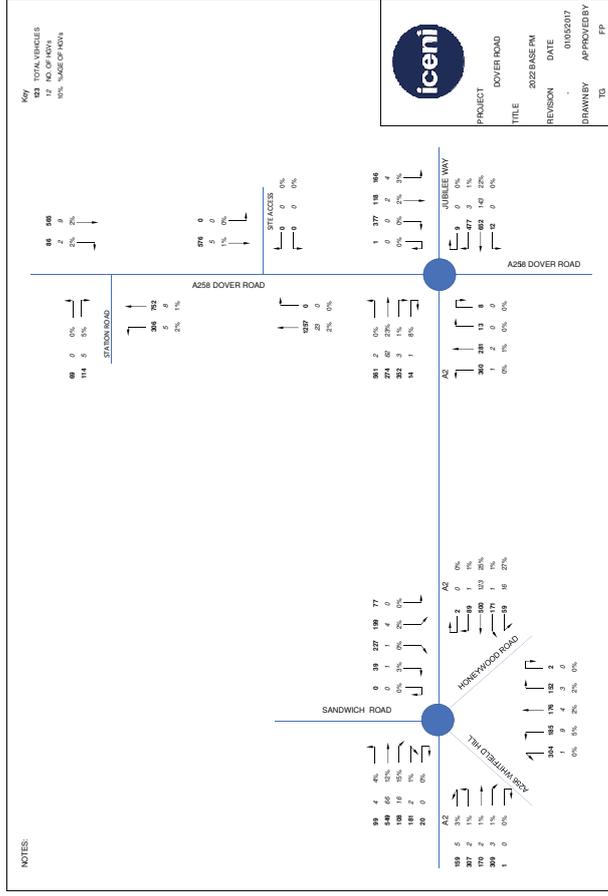

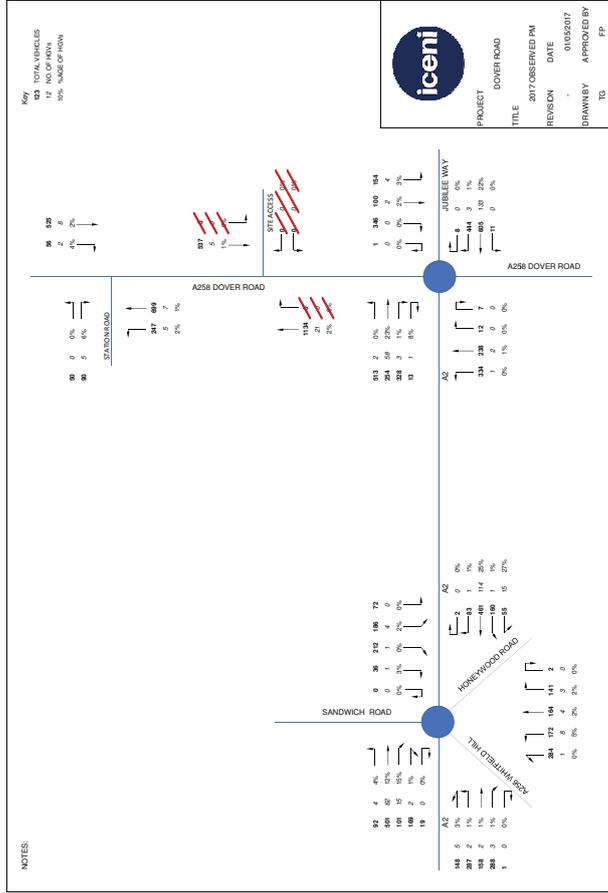

Problem no. in safety audit report	Problem(s) accepted (yes/no)	Recommended measure accepted (yes/no/in part)	Alternative measure (detail description)
GENERAL			
2.1	Yes	Yes	Accepted. Details on lighting, signage, vegetation and drainage will be provided at the detail design stage for a Stage 2 Road Safety Audit.
PROBLEM			
2.2	No	Yes	Noted. Widening of the footway has been provided on the opposite side of the carriageway, as such existing driveway will be maintained and remain in-situ. Furthermore information will be provided at the detailed design and be subject to a Stage 2 Road Safety Audit.
2.5	No	In part	Noted. The design team cannot provide a connecting footway on the eastern side of the proposed bus stop to tie-in with the existing footpath heading into Walmer, as the applicant is not in control of the land past their site boundary. An additional uncontrolled crossing can be provided but outside of the site boundary.
2.6	No	No	Noted. The proposal allows for a 2m wide footway only. Cycle movements have been projected within the TA that the development would generate one two-way cycling trip in the AM peak hour and two two-way trips in the PM peak hour. The access has been designed in accordance with the 'Kent Design Guidance' which considers the needs of all users, therefore we consider this unnecessary.

Summary of junction performance

	AM	
	Queue (Veh)	RFC
	AM Peak - 2017 Observed	
A - Sandwich Road	15.4	0.99
B - A2 (East)	14.1	0.97
C - Honeywood Road	7.9	0.93
D - A256 Whitfield Hill	12.1	0.97
E - A2 (West)	17.2	0.99
	AM Peak - 2022 Base	
A - Sandwich Road	44.4	1.09
B - A2 (East)	56.7	1.14
C - Honeywood Road	18.8	1.04
D - A256 Whitfield Hill	25.0	1.05
E - A2 (West)	26.9	1.04
	AM Peak - 2022 Proposed	
A - Sandwich Road	44.6	1.09
B - A2 (East)	62.1	1.15
C - Honeywood Road	19.3	1.04
D - A256 Whitfield Hill	25.0	1.05
E - A2 (West)	26.9	1.04
	AM Peak - 2022 Proposed + Speculative Development (Land at Cross Road c. 235 units)	
A - Sandwich Road	46.0	1.09
B - A2 (East)	64.5	1.17
C - Honeywood Road	19.8	1.05
D - A256 Whitfield Hill	24.7	1.05
E - A2 (West)	28.5	1.05

Queue (Veh)		RFC	
PM			
PM Peak - 2017 Observed			
A - Sandwich Road	0.8	0.44	
B - A2 (East)	3.4	0.78	
C - Honeywood Road	13.8	0.99	
D - A256 Whitfield Hill	95.6	1.26	
E - A2 (West)	3.1	0.76	
PM Peak - 2022 Base			
A - Sandwich Road	1.0	0.50	
B - A2 (East)	5.5	0.86	
C - Honeywood Road	42.1	1.15	
D - A256 Whitfield Hill	210.0	1.45	
E - A2 (West)	4.2	0.82	
PM Peak - 2022 Proposed			
A - Sandwich Road	1.0	0.50	
B - A2 (East)	5.7	0.86	
C - Honeywood Road	43.0	1.15	
D - A256 Whitfield Hill	211.4	1.45	
E - A2 (West)	4.4	0.83	
PM Peak - 2022 Proposed + Speculative Development (Land at Cross Road c. 235 units)			
A - Sandwich Road	1.0	0.51	
B - A2 (East)	6.2	0.87	
C - Honeywood Road	44.7	1.16	
D - A256 Whitfield Hill	214.7	1.46	
E - A2 (West)	4.6	0.83	

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set. Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	Sandwich Road/A2/Honeywood Road/A256 Whitfield Hill/A2
Location	Walmley
Site number	
Date	24/05/2017
Version	
Status	TG
Identifier	
Client	Gladman Developments
Jobnumber	16-1129
Enumerator	ICENIPROJECTS\lgood
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perTimeSegment	s	-Min	perMin

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Flow Arm A	Analysis Options	Queue Variations cannot be calculated for the selected traffic profile type.
Warning	Flow Arm B	Analysis Options	Queue Variations cannot be calculated for the selected traffic profile type.
Warning	Flow Arm C	Analysis Options	Queue Variations cannot be calculated for the selected traffic profile type.
Warning	Flow Arm D	Analysis Options	Queue Variations cannot be calculated for the selected traffic profile type.
Warning	Flow Arm E	Analysis Options	Queue Variations cannot be calculated for the selected traffic profile type.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Data Errors and Warnings

No errors or warnings

Junction Network

Junction	Name	Junction Type	Major road direction	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	0.20	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arm	Name	Description	Arm type
A	A258 Dover Road (North)		Major
B	Site Access		Minor
C	A258 Dover Road (South)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocking queue (PCU)
C	6.00		✓	3.00	200.0	5.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	2.75	91	100

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (Veh/hr)	Slope for AB	Slope for AC	Slope for C-A	Slope for C-B
1	B-A	544	0.099	0.250	0.157	0.358
1	B-C	670	0.103	0.259	-	-
1	C-B	750	0.291	0.291	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments. Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction Type	Major road direction	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	5.18	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Dover Road (S)		Major
B	Station Road		Minor
C	Dover Road (N)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	8.44			135.0	✓	1.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	2.91	29	19

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept for (Veh/min)	Slope for AB	Slope for AC	Slope for C-A	Slope for C-B
1	B-A	8.198	0.090	0.202	0.127	0.289
1	B-C	10.503	0.098	0.218	-	-
1	C-B	10.869	0.226	0.226	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments. Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Subject: FW: TRL Confirmation on RFC and Queues/Delay

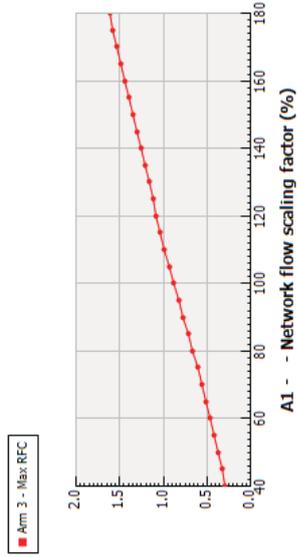

From: Burtenshaw, Graham [<mailto:gburtenshaw@trl.co.uk>]
Sent: 14 June 2017 16:32
To: Mitchell Gregory
Subject: RE: Web Enquiry from Mr Mitchell Gregory

Hi Mitch

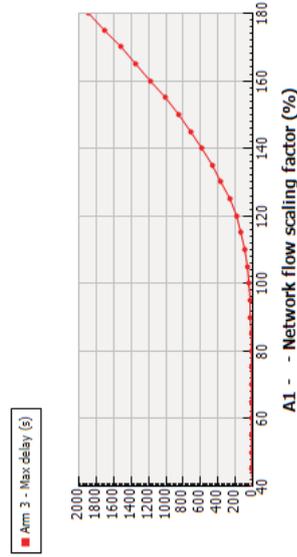

Thanks for your email.

Probably what James meant is that the queue and delay increase very rapidly as the RFC increases above about 0.8. The following graphs (produced using Junctions 9) may help to illustrate:

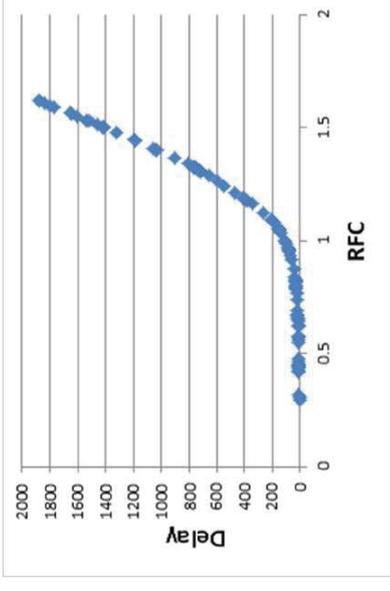

If you make the junction busier by adding more traffic, the RFC increases more or less linearly:

However the delay (and queue) increase exponentially:

Plotting the delay (or queue) against the RFC shows how it increases rapidly as the RFC approaches and exceeds 1.0:

So if you have a low RFC, then the queue and delay will be fairly small and small increases in traffic won't have much effect. But if you have an RFC over about 0.8, then the junction gets much more sensitive to small changes in traffic flows. On a minute-by-minute basis, if the RFC is around 0.8 – 1.2, then there will be times when the queues vary between very short and very long (i.e. very volatile). If the RFC is higher than this then there will pretty much be permanent queueing. The results in ARCADY and PICADY are average values, i.e. what you'd get if you averaged many days. The day-to-day variation is likely to be greatest when the RFC is 0.8 – 1.2. (Less than this and the queues are consistently small; more than this and the queues are predictably high.)

The RFC is the ratio of flow to capacity. If the capacity of a give-way line is constant, then as you increase the flow then the RFC will increase linearly. However if the capacity is decreasing because the roundabout is getting busier and there's more circulating flow, then it may seem like the RFC is increasing more quickly.

I hope this helps – please let me know if you have any questions though.

Best regards
Graham

Subject: RE: Web Enquiry from Mr Mitchell Gregory

Hi Graham,
Another quick one, hopefully!

When James came to our offices we had a discussion regarding the accuracy of models as they approach and pass a RFC 1.00. I don't want to put words in James' mouth, as I am not 100% sure I remember the answer correctly but it was my understanding that this is the case, especially as the RFC passes 1.00. In my head we have an exponential graph where there is a RFC 0.00-1.00 window which depending on geometries and flows in located along this graph. So as the RFC approaches and passes 1.00 the step between each RFC step becomes smaller. James said this was along the right lines as the model can't predict drivers pushing out.

Do you have any text available that we can use which explains the RFC relationship as we often have a scenario where once we reach an RFC 1.00, the RFC increases significantly quicker than when it is under 1.00. For example, at an RFC of 0.90, two additional vehicles will increase the RFC by 0.01, but when the RFC is above 1.00, these additional vehicles may increase it by 0.20 or more.

I raise this as sometimes we have junctions that are just over capacity that look significantly over capacity but in fact due to daily fluctuations on the network, may be under or just over capacity.

Hopefully the above makes, I appreciate it is not particularly clear!

Chicets,

Mitch
